Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AGSGCAGMGARMRAAACAGSGCAGMGMGCGMGMGASCGCVRGRAACGCGGAGCGAGASMG 398
               Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

λą Diagnosing and/or determining a predisposition to a cellular proliferative disorder of breast tissue, in particular breast cancer, determining the state of methylation of one or more nucleic acids isolated from the subject WPI; 2002-599803/64.

Disclosure, Fig 9A, 115pp, English.

The present invention relates to a method of diagnosing a cellular proliferative disorder of breast tissue, which involves determining the state of methylation of one or more nucleic acids isolated from the subject, where the state of methylation of the nucleic acids as compared with a state of methylation from a subject not having the cellular proliferative disorder of breast tissue is indicative of a cellular proliferative disorder of breast tissue in the subject. The nucleic acids

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                465
may be TWIST, HOXA5, NES-1, retinoic acid receptor beta (RARbeta), oestrogen receptor, cyclin D2, Wilms' tumour gene (WT-1), 14.3.3 sigma, HIN-1 or RASSFIA. The method is useful for diagnosing and/or determining a predisposition to a cellular proliferative disorder, in particular breast cancer including ductal carcinoma in situ, lobular carcinoma, colloid carcinoma, medillary carcinoma, metaplastic carcinoma, intraductal carcinoma, medillary carcinoma, metaplastic carcinoma in situ. The present sequence is a gene fragment used in the exemplification of the invention

Sequences shown in AAV54616 to AAV54621 represent LU105 specific polymucleotide sequences. These are used in the method of the invention for detecting target LU105 nucleic acid. The method comprises treating a sample with at least one LU105 specific nucleic acid, or its complement which is at least so percent identical with the LU105 specific nucleic acid sequences (AAV54616 to AAV5461). LU105 is a lung disease marker.

Cells transformed with a recombinant expression system that contains LU105 specific nucleic acid fragments, are used to express recombinant LU105 polypeptides which are used to raise antibodies. The antibodies are used to detect the LU105 antipodies, in usual immunoassays. The LU105 polypeptides and nucleic acid sequences are used for diagnosis, staging, monitoring, prognosis, prevention, treatment and determination of polypeptides are also used to screen for specific binding agents, useful therapeutically, LU105 is a marker for lung disease (present at high concentration, in altered form or in an unusual body compartment). LU105 can be detected in blood, plasma or serum in an inexpensive, non-invasive test. (Updated on 25-MAR-2003 to correct PI field.)

of for

for detecting target LU105 nucleic acid. The method of the invention for detecting target LU105 nucleic acid. The method comprises treating a sample with at least ton EU105 specific nucleic acid. Or its complement which is at least 50 percent identical with the LU105 specific nucleic acid sequences (AAV54616 to AAV54621). LU105 is a lung disease marker. CC calls transformed with a recombinant expression system that contains LU105 specific nucleic acid fragments, are used to express recombinant cut used to obtain the nucleic acid fragments, are used to express recombinant cut used to detect the LU105 antibodies. The antibodies are used to detect the LU105 antibodies, in usual immunoassays. The LU105 polypeptides and nucleic acid sequences are used for diagnosis, staging, cused to detect specific antibodies, in usual immunoassays. The LU105 polypeptides and nucleic acid sequences are used for diagnosis, staging, conjugentially to, lung disease, specifically cancer. The LU105 cusceptibility to, lung disease, specifically cancer. The LU105 cusceptibility to, lung disease, specifically cancer at high concentration, in altered form or in an unusual body compartment). LU105 can be detected in blood, plasma or serum in an inexpensive, non-invasive test. (Updated on 25-MAR-2003 to correct PI field.) 431 GCAGGGCTTTCTCAGGAGCGCGGGCGAGGCCGGCGCTGGAGGGGCGAGGACCGGGTATAA 490 GAAGCCTCGTGGCCCTTGCCCGGGCAGCCGCAGGTTCCCCGGGGGCCCCGAGCCCCGGGGC 550 GANGCCTCGTGGCCTTGCCCGGGGCAGCCGCAGGTTCCCCGCGCCCCCGANCCCCCGCGCCCTC GCAGGGCTTTCTCAGGNGCGCGGGCGAGGCCGGCGCTGGAGGGGCGAGGACCGGGTATAA 60 New nucleic acid for the lung disease marker LU105 - polypeptides, antibodies and genes, used for diagnosis, prevention, treatment of lung disease, specifically cancer. The invention relates to a novel isolated cDNA and a cDNA encoding pepsin C. The polymucleotide of the invention may be useful as a probe or a component within an expression vector, as a diagnostic in assessing the prognosis and treatment of a lung disorder and as a potential therapeutic or target for the identification of therapeutics for lung disorders. With the polymucleotide may be used to produce purified proteins or peptides which can subsequently be used to produce antibodies. The current sequence is that of the human lung disorder-related cDNA (SEQ ID
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Lung Specific Gene; LSG; Lng107; human; diagnostic marker; prognosticate; lung cancer; diagnosis; ds.
                                                                                                                                        New cDNAs co-expressed with lung surfactant and surfactant synthesis genes, useful as diagnostics in assessing the prognosis and treatment a lung disorder, or as potential targets for identifying therapeutics lung disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                               ;

                                                                                                                                                              The present sequence is a lung specific gene (LSG) Lng107 from human clone ID 566271. The LSG has high level of tissue specificity for lungs and is overexpressed in cancerous tissues. The sequence serves as a diagnostic marker for detecting, monitoring, staging and prognosticating lung cancer. The diagnosis involves comparing levels of LSG in samples

activity or function of HSPP. Such diseases include cell proliferation (including cancer), inflammation, cardiovascular, neurological, reproductive or developmental disorders, (e.g. arteriosclerosis, cirrhosis, psoriasis, acquired immune deficiency syndrome, anaemia, asthma, Crohn's disease, microbial or other infections, congestive or ischaemic heart disease, Alzheimer's, Parkinson's or Huntington's diseases, schizophrenia, ovulatory defects, muscular dystrophy). HSPP mucleic acids can be used for the recombinant production of HSPP, for detecting HSPP in standard hybridisation and amplification assays (for diagnosis and monitoring), in gene therapy, as antisense, triplex-forming or thosyme therapeutics, for detecting related sequences or genetic minimals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 HSPP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              460 CCGGCGCTGGAGGGGCGAGGACCGGGTATAAGAAGCCTCGTGGCCTTGCCCGGGCAGCCG 519
                                                                                                                                                                 AAZ98109 to AAZ98242 encode AAY87224 to AAY87357 which represent the human signal peptide-containing proteins HSPP-1 to HSPP-134. HSPPs have anticancer, anti-inflammatory, antimicrobial, nootropic, hepatotropic, neuroprotective, cardiovascular and antiasthmatic activities, and can be used in gene therapy. HSPPs can be used to treat or prevent disorders associated with decreased activity or function of HSPP. Antagonists of HSPP are used to treat or prevent disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     09
New human signal peptide-containing proteins useful in treatment, prevention and diagnosis of e.g. cancer, inflammation and cardiovascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (potential therapeutic agents). Ab are used to diagnose, or monitor, HS -related diseases (in usual immunoassays), as therapeutic antagonists, competitive drug screens, and for purification of HSPP from natural
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CCGGCGCTGGAGGGCGAGGACCGGGTATAAGAAGCCTCGTGGCCTTGCCCGGGCAGCCG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      variations, and for chromosomal mapping. HSPP are also used to raise specific antibodies (Ab) and to screen for agonists and antagonists
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 LU105; lung disease marker; immunoassay; lung disease; cancer; blood;

conjuncted tide sequences. These are used in the method of the invention for detecting target LU105 nucleic acid. The method comprises treating a sample with at least boulder acid. The method comprises treating a sample with a teast boulder specific nucleic acid. Or its complement which is at least 50 percent identical with the LU105 specific nucleic acid sequences (AAV54616 to AAV54621). LU105 is a lung disease marker. Cells transformed with a recombinant expression system that contains LU105 specific nucleic acid fragments, are used to express recombinant LU105 polypeptides which are used to raise antibodies. The antibodies are used to detect the LU105 antibodies, in usual immunoassays. The LU105 polypeptides and nucleic acid sequences are used for diagnosis, staging, onlypeptides and nucleic acid sequences are used for diagnosis, staging, susceptibility to, lung disease, specifically cancer. The LU105 polypeptides are also used to screen for specific binding agents, useful therapettically, LU105 is a marker for lung disease (present at high concentration, in altered form or in an unusual body compartment). LU105 can be detected in blood, plasma or serum in an ineadsoning, non-invasive test. (Updated on 25-MAR-2003 to correct PI field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antibodies and genes, used for diagnosis, prevention, treatment of lung disease, specifically cancer.
                                                                                                                                                                                           Cohen M, Colpitts TL, Friedman PN, Gordon J; es SC, Klass MR, Kratochvil JD, Robertsrapp L;

RESULT 8 ABK40267

ABK40267;

ABK40267 standard; cDNA; 569 BP.

cDNA encoding human PRO1245 polypeptide. (first entry) 15-JUL-2002

Human; PRC; benign tumour; malignant tumour; lymphoid malignancy; leukaemia; meuronal disorder; stromal disorder; blastocoelic disorder; inflammatory disorder; immune disorder; angiogenic disorder; gene therapy; cytostatic; neuroprotective; gene; ss.

WO200153486-Al

26-JUL-2001

```
polypeptides and the polynucleotide sequences encoding them. The PRO polypeptides, agoniets, antagonists or anti-PRO antibodies are useful for treating benign or malignant tumours (e.g. renal, kidney, bladder, breast, etc), leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic, glandular, macrophagal, stromal and blastocoelic disorders, inflammatory, immune and angiogenic disorders. The polynucleotide sequences are also useful in gene therapy. ABK40254-ABK40288 encode for the human PRO polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       present invention relates to the isolation of novel human PRO
                                                                                                                                                                                                                                                                                                                                                                                                                                Thirty five nucleic acids encoding PRO polypeptides, useful for benign or malignant tumors, leukemias and lymphoid malignancies, inflammatory, angiogenic and immunologic disorders.
                                                                                                                                                                                                                                                                                                                                 Hillan KU;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0
                                                                                                                                                                                                     polynucleotides encoding them. The PRO sequences of the invention were identified based on extracellular domain homology screening. The PRO sequences have homology with proteins including LDL receptors, TIE ligands and various enzymes. The membrane-bound proteins and receptor molecules are useful as pharmaceutical and diagnostic agents. Receptor immunoadhesins, for instance, can be used as therapeutic agents to block receptor-ligand interactions. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. The PRO encoding sequences are useful as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. PRO mucleic acid sequences will also be useful for the preparation of PRO polypeptides, especially by

The present invention describes human secreted and transmembrane PRO proteins. The PRO proteins have cytostatic activity. The PRO proteins can be used for targeted delivery of bioactive molecules, such as toxins, radiolabels or antibodies, that cause cell death. PRO nucleotide sequences, and their fragments, can be used as hybridisation probes, in chromosomal and gene mapping, and in the generation of anti-sense RNA and DNA. They may also be used to produce transgenic animals which are used to develop and screen therapeutically useful reagents. The PRO nucleotide and protein sequence can be used for tissue typing and in treating ancer. Anti-PRO antibodies can be used in diagnostic assays. AAF44270 to AAF4470 represent PRE primers and hybridisation probes used in the isolation of human PRO sequences. AAF44087 to AAF44269 and AAB55154 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PRO polynucleotides used to produce polypeptides used to target bioactive molecules such as toxins, radiolabels or antibodies, to specific cells, to cause targeted cell death.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              474 GCGAGGACCGGGTATAAGAAGCCTCGTGGCCTTGCCCGGGGCAGCCGCAGGTTCCCCGGGC 533

Novel isolated PRO polypeptides e.g., PRO826, PRO1068, PRO1184, PRO1346 and PRO1375, which stimulate proliferation of stimulated T-lymphocytes are therapeutically useful for enhancing immune response and in cancer treatments

Claim 2; Fig 291; 648pp; English.

The invention describes an isolated human PRO polypeptide. The PRO polypeptides are useful in detecting PRO polypeptides in a sample, in inhibiting a bioactive molecule to a cell expressing a PRO polypeptide, and in modulating at least one biological activity of a cell expressing a PRO polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus useful for treating cardiac insufficiency disorders. PRO134 and PRO136 trimulate adrenal cortical capillary endothelial growth, and PRO136, PRO943, PRO926, PRO926, PRO926, PRO943, PRO926, PRO926, PRO1068 or PRO535, PRO826, PRO916, and are thus useful for treating conditions or disorders where angiogenesis would be beneficial, e.g. wound healing and antagonist of this polypeptide are useful for treating cancerous tumours. PRO912 inhibits vascular calcing acancerous tumours. PRO912 inhibits vascular calcing acancerous tumours is proliferation of endothelial growth factor (VDEP) stimulated proliferation of endothelial which would be beneficial in inhibiting tumour growth. PRO926, PRO1068, PRO1364 and PRO1375 stimulate proliferation of stimulated T-1ymphocytes and are therapeutically useful for enhancing immune response. PRO828, PRO826, PRO1058 or PRO1132 enhance survival of

retinal neurons cells (PRO1132 is also enhances survival/proliferation of photoreceptor cells) and therefore are useful for treating retinal disorders of injuries, e.g. retinitis pigmentosum, AMD. PRO819 and PRO11066 induce proliferation of mammalian kidney mesangial cells, and therefore are useful for treating kidney disorders associated with nephropathies associated with dermatitis, herpetiformis or other nephropathies associated with dermatitis, herpetiformis or Crohn's disease. PRO1310, PRO844, PRO1312, PRO1192 and PRO1387 induce the proliferation and/or redifferentiation of chondrocytes in culture and arthus useful for treating sports injuries, and arthritis. This sequence represents a novel human PRO protein polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              474 GCGAGGACCGGGGTATAAGAAGCCTCGTGGCCTTGCCCGGGGCAGCCGCAGGTTCCCCGGGC

The invention discloses isolated PRO secreted/transmembrane polypeptides comprising a sequence without signal peptide and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive compensation and for modulating at least come biological activity of a cell. The PRO polypeptides or polymerlectides are also useful in gene therapy, in chromosome compensation, as chromosome markers, or in generating probes. The PRO identification, as chromosome markers for protein electrophoresis, polypeptides are useful as molecular markers for protein electrophoresis, and the isolated nucleic acids may be used for recombinantly expressing those markers. The PRO polypeptides and nucleic acids may also be used in tissue typing. Anti-PRO antibodies are useful in diagnostic assays for PRO, and in affinity purification of PRO from recombinant cell culture or PRO, and in affinity purification of PRO from recombinant cell culture or matural sources. The sequences presented in ABX90083-ABX90468 are the contains, the primers amplifying and the probes detecting the PRO polymucleotides of the invention. Note: The sequence data for this patent of polymucleotides of the invention format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          474 GCGAGGACCGGGTATAAGAAGCCTCGTGGCCTTGCCCGGGCAGCTGCCCGCGC 533

Novel secreted and transmembrane polypeptide for modulating biological activity of cell expressing the polypeptide, identifying agonists or antagonists of polypeptide, and as molecular weight markers.

Claim 2; Fig 289; 649pp; English.

The present invention relates to the isolation of novel human PRO polypeptides, and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are useful for detecting other PRO polypeptides, for linking biological activities of cells expressing PRO polypeptides, and for inconding PRO polypeptides are useful as hybridisation probes, in charmonic properties of cells expressing PRO polypeptides and for for chromosome and gene mapping, in the generation of antisense RNA and DNA, in the preparation of properties of chromosome and gene mapping, in the generation of antisense RNA and DNA, in the preparation of PRO polypeptides, for generating transgenic animals or knockout animals, to construct hybridisation probes for mapping the construct hybridisation probes for mapping the individuals with genetic disorders, in gene therapy, for chromosome chartication, as chromosome markers, and for generating probes for PCR, Northern analysis, Southern analysis and Western analysis. The present sequence encodes a human PRO polypeptide of the invention. Note: The construct by the USPTO web site at sequence down/propried in electronic format directly from the USPTO web site at sequence government and response the properties of the invention.

Consensus quality: 120225 bases at least Q20
Estimated insert size: 131000; pulse field gel estimation
Estimated insert size: 126288; sum-of-contigs estimation
Quality coverage: 7.48 in Q20 bases; pulse field gel estimation

* NOTE: This is a 'working draft' sequence. It currently
* consists of 13 contigs. The true order of the pieces
* is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              of 2103 bp in length funknown length (2 3395 bp in length unknown length g of 8361 bp in length funknown length g of 14589 bp in length

                                                                                                                                                                                                                                                                                                                                                                                  NOTE: This is a 'working draft' sequence. It currently consists of 32 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This is a 'working draft' sequence. It currently
* consists of 4 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
